## Consent

Please download the consent form and provide your informed consent if you are willing to participate in the study. Please note that questions cannot be skipped in the survey. All questions in this survey are mandatory to answer as the data from each of the sections such as layer distinctness, item level evaluation, measurement readiness and expert insights are all key towards validating the schema framework. There is an option to select "prefer not to answer" for the demographic questions.

In this study, **bias refers to code or decision logic that may result in unfair or systematically different treatment of individuals or groups based on protected**

**characteristics or closely related proxy variables.**

Given a code snippet you will identify if there are biases in the code function, and if so where, and why it would be considered bias. Explanations should be clear and concise. There are 9 code snippets to review in the first phase followed by the same 9 code snippets in the second phase.

This survey will take ~20-30 minutes.

## Section Change

For the remaining questions, each code example will be accompanied by a **bias report** that highlights any identified biases. The report will include information about whether the bias is positively or negatively associated, the potential bias-related issues within the code, any protected attributes involved (e.g., age, gender), and the corresponding code snippets that contributed to the

detection. **Please review the provided bias report PDF before answering the associated questions.**

## Overall, how do you think BiasAuditor reports should be used during code review?

- [ ] As a first-pass screening tool to identify potential fairness concerns before manual review.
- [ ] As a decision-support tool to assist developers in evaluating fairness concerns while making the final judgment themselves.
- [ ] As a second opinion to verify my own assessment after I have reviewed the code.
- [ ] Only for code involving decisions about people (e.g., hiring, lending, healthcare, education).
- [ ] Only when reviewing AI-generated code, not manually written code.
- [ ] As an educational tool to help developers learn about fairness issues in code.
- [ ] I would rarely or never use this type of tool during code review.
